Arjun Menon

Python Backend Developer

Kozhikode, Kerala | +91 90000 12345 | arjun.menon.synthetic@example.com
github.com/arjun-menon-dev | linkedin.com/in/arjun-menon-dev

PROFESSIONAL SUMMARY

Entry-level Python backend developer with hands-on experience building REST APIs and data-driven web applications. Comfortable with Python, FastAPI, Django, PostgreSQL, SQL, Git, Pydantic, SQLAlchemy and pytest. Interested in reliable API design, clean data models, automated testing and maintainable backend services.

CORE TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

Backend: FastAPI, Django, Django REST Framework, REST APIs

Databases: PostgreSQL, MySQL, SQLite

Libraries: Pydantic, SQLAlchemy, Pandas, NumPy

Testing: pytest, unittest, API testing

Tools: Git, GitHub, Docker, Postman, VS Code

PROFESSIONAL EXPERIENCE

Python Backend Developer Intern

CodeNest Technologies · Kochi, Kerala · Jan 2024 – Jun 2024

- Developed FastAPI endpoints for candidate, job-description and application workflows.
- Designed PostgreSQL tables and SQL queries for candidate profiles and scoring results.
- Built Pydantic request and response schemas with validation for REST API payloads.
- Wrote pytest cases for authentication, validation, CRUD operations and error handling.
- Used Git and pull requests for source control, code review and release preparation.

Software Engineering Trainee

BluePeak Digital Labs · Calicut, Kerala · Jul 2023 – Dec 2023

- Implemented Django modules for student registration and administrative dashboards.
- Created reusable service functions for database operations and input validation.
- Tested APIs with Postman and documented common request and response examples.
- Investigated defects involving form validation, database constraints and JSON responses.

SELECTED PROJECTS

Recruitment ATS API

Technology: Python, FastAPI, PostgreSQL, Pydantic, pytest

Built an ATS backend that accepts resumes, extracts structured candidate profiles, evaluates job-relevant skills and produces explainable scoring results.

- Designed request and response models with explicit validation and useful error messages.
- Separated API, service and persistence responsibilities to keep the codebase easier to test.
- Added automated tests for successful requests, invalid input, missing records and database failures.
- Used Git branches and pull requests to track feature changes and review backend modifications.

Inventory Management REST API

Technology: Django REST Framework, PostgreSQL, Docker

Created CRUD endpoints for products, suppliers and stock movements with serializer validation, pagination and role-aware access checks.

- Designed request and response models with explicit validation and useful error messages.
- Separated API, service and persistence responsibilities to keep the codebase easier to test.
- Added automated tests for successful requests, invalid input, missing records and database failures.
- Used Git branches and pull requests to track feature changes and review backend modifications.

Student Registration Portal

Technology: Django, SQLite, HTML, CSS

Developed a small registration application with server-side validation, database persistence and a simple administrative listing page.

- Designed request and response models with explicit validation and useful error messages.
- Separated API, service and persistence responsibilities to keep the codebase easier to test.
- Added automated tests for successful requests, invalid input, missing records and database failures.
- Used Git branches and pull requests to track feature changes and review backend modifications.

TECHNICAL CONTRIBUTIONS

- Created reusable Python utilities for parsing JSON input and normalizing candidate information.
- Implemented REST endpoints using FastAPI routers, dependency injection and Pydantic models.
- Worked with PostgreSQL constraints, indexes, joins, transactions and parameterized SQL queries.
- Used SQLAlchemy for database access in API prototypes and Django ORM for Django-based applications.
- Investigated API failures by reproducing requests in Postman and reviewing server logs.
- Added unit tests and integration-style API tests with pytest to reduce regressions during changes.
- Containerized selected development services with Docker and documented local setup requirements.
- Reviewed response payloads for consistent HTTP status codes and machine-readable error structures.
- Practiced writing concise API documentation and examples for common frontend consumers.
- Applied Git workflows including branching, merging, pull requests and resolving simple conflicts.

EDUCATION

B.Tech in Computer Science and Engineering — Kerala Institute of Technology (2020 – 2024)

Higher Secondary – Computer Science — Government Higher Secondary School (2018 – 2020)

CERTIFICATIONS

- Python Programming Fundamentals – SkillForge Academy, 2024
- REST API Development with FastAPI – DevPath Learning, 2024
- SQL and PostgreSQL Essentials – OpenLearn Labs, 2023

ACHIEVEMENTS

- Built and demonstrated a working FastAPI project during a final-year engineering project review.
- Presented a database-backed REST API prototype at a college technical event.
- Maintained project documentation with setup steps, API examples and test instructions.
